(III SEM)**

Submitted By
Siddhi Jedhe

**Subject Incharge Name
Prof. Bharti Khemani**

Problem Definition

Project Description:

“**खादाड खिडकी**” is a web-based food ordering platform that allows users to browse a menu, register/login, add items to a cart, and place orders seamlessly. The system manages user sessions, handles cart operations, and stores order information in a database. It provides a user-friendly interface along with backend functionality to ensure a smooth ordering experience.

Key Components / Modules:

Home Page (index.html):

- Displays the brand, tagline, navigation, and buttons to access menu, cart, login, and registration popups.
- Includes interactive **login and register popups** using HTML/CSS and JavaScript.
- Responsive navigation and clickable links for Menu, Cart, About, and Contact sections.

Menu Page (menu.html):

- Displays food items with details and prices.
- Provides **Add to Cart functionality** through forms that interact with the **AddToCartServlet**.

User Authentication:

Registration (register.html + RegisterServlet.java):

- Users can register by providing Name, Email, and Password.
- Backend validation and database insertion handled via JDBC.

Login (login.html + LoginServlet.java):

- Authenticates users with email and password.
- Maintains user sessions using HttpSession.

Shopping Cart (cart.jsp):

- Displays the current items added by the user along with quantity, price, and subtotal.
- Allows **removing items** using **RemoveFromCartServlet**.

- Calculates **total cost dynamically** using JSP and session attributes.
- Provides a **Place Order** button linked to **OrderServlet**.

Order Placement (OrderServlet.java):

- Processes the cart items and stores order details in the database (`orders` table) via JDBC.
- Clears the cart after order completion.
- Redirects the user to a **success confirmation page** (`orderSuccess.html`) or shows a **popup notification** on home page.

Session Management:

- Cart and login sessions managed using **HttpSession** to ensure persistence across pages.

Database Integration (MySQL):

- Stores user credentials, order details, and other data.
- Interacts with servlets using **JDBC (Java Database Connectivity)**.
- Example tables: `users`, `orders`.

Front-end Design:

- HTML for structure of pages and forms.
- CSS for styling pages, popups, buttons, and layouts.
- JavaScript for interactivity like popup toggles and order success alerts.

Back-end Logic (Java Servlets):

- Servlets handle **HTTP POST/GET requests**, form submissions, session management, and database CRUD operations.
- **Examples:** `LoginServlet`, `RegisterServlet`, `AddToCartServlet`, `RemoveFromCartServlet`, `OrderServlet`.

Additional Features:

- Real-time cart updates using JSP and session objects.
 - Price mapping and subtotal calculation on cart page.
 - User-friendly redirects and success messages for a smooth user experience.
-

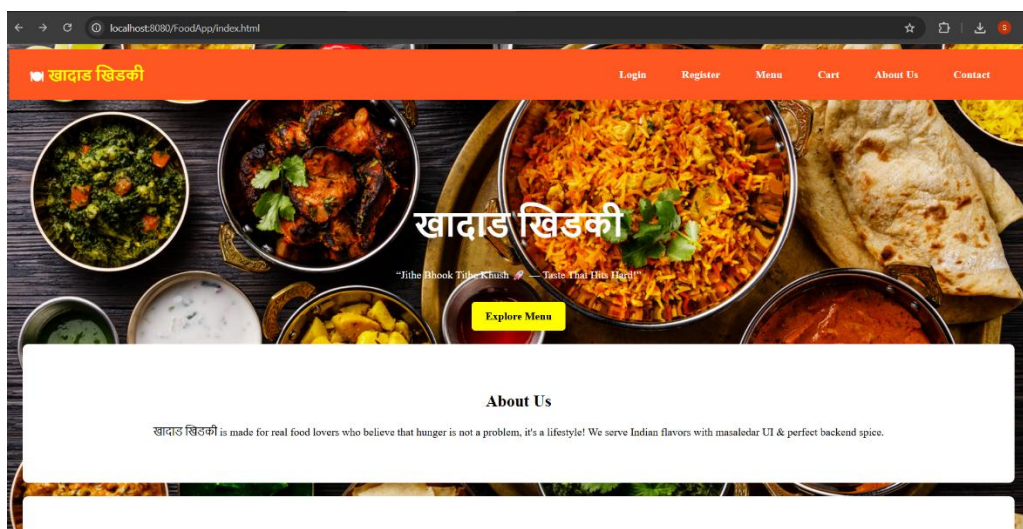

Technologies & Tools Used:

Layer	Technology / Tool
Front-end	HTML, CSS, JavaScript, JSP
Back-end	Java Servlets
Database	MySQL, JDBC
Web Server	Apache Tomcat 9.0
Development	VS Code

Techniques Implemented:

- **MVC-like structure:** JSPs for views, Servlets for controller logic, and MySQL as model.
- **Form Handling:** HTML forms POSTed to servlets for processing.
- **Session Handling:** User login and cart persistence via `HttpSession`.
- **Dynamic Page Updates:** JSP used to calculate totals and display cart dynamically.
- **Redirect & Alerts:** `sendRedirect()` and JavaScript used to notify users about order success.
- **Security Measures:** Simple validation for login/registration; session checks to prevent unauthorized actions.

RESULTS : FrontEnd

Our Special Indian Menu

Paneer Tikka
Spicy marinated paneer grilled to perfection!
Price: ₹220
[Add to Cart](#)

Butter Chicken
Rich creamy chicken curry with Indian spices.
Price: ₹300
[Add to Cart](#)

Masala Dosa
Classic South Indian dosa with masala filling.
Price: ₹100
[Add to Cart](#)

Chole Bhature
Punjabi style spicy chole with fried bhature.
Price: ₹150
[Add to Cart](#)

Your Cart

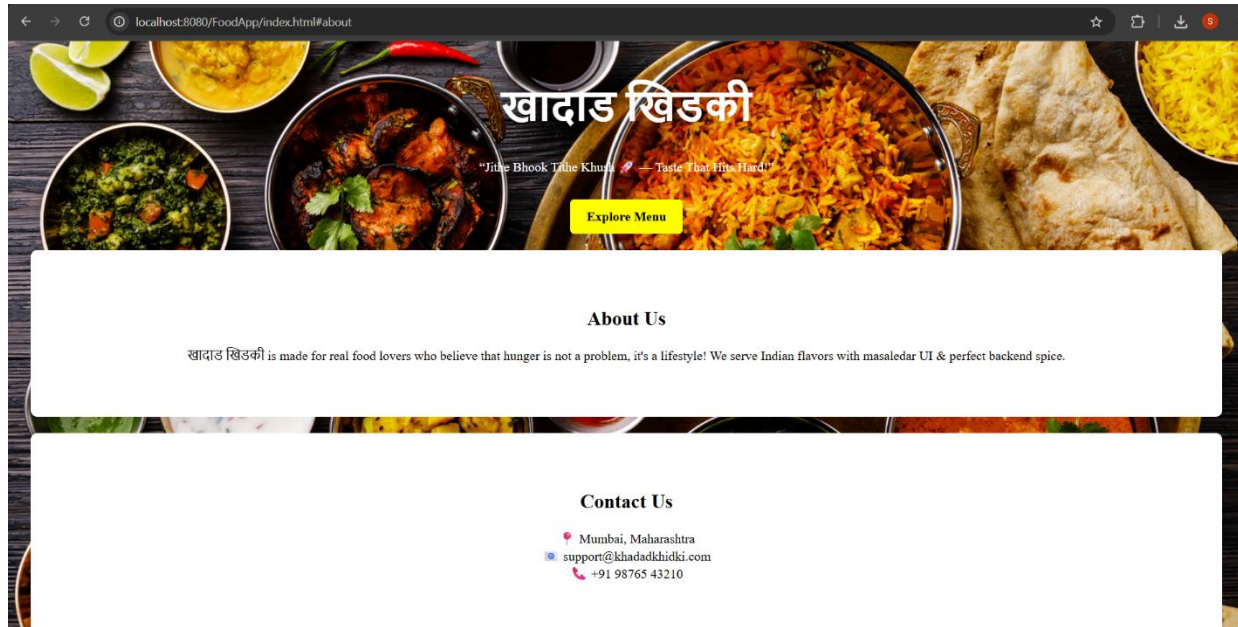

Item	Qty	Price (₹)	Subtotal (₹)	Action
Masala Dosa	1	100	100	Remove
Chole Bhature	1	150	150	Remove
Samosa	1	20	20	Remove

Total: ₹270

Query 1

```
2 SELECT * FROM orders;
3 USE fooddb;
4 SELECT * FROM users;
5 USE fooddb;
6 SELECT * FROM users;
7 USE fooddb;
8 SELECT * FROM orders;
```

Result Grid

	id	user_email	item	quantity	total
1	1	siddhjedhe03@gmail.com	Burger	1	100.00
2	2	siddhjedhe03@gmail.com	Burger	1	100.00
3	3		Paneer Pizza	1	100.00
4	4		Samosa	1	100.00
5	5	Nidhi@123	Masala Dosa	1	100.00
6	6	Nidhi@123	Chole Bhature	1	150.00
7	7	Nidhi@123	Samosa	1	20.00
8	8	Nidhi@123	Alloo Paratha	1	80.00

Output

Action Output

#	Time	Action	Message	Duration / Fetch
11	01:30:42	USE fooddb	0 row(s) affected	0.000 sec
12	01:30:42	SELECT * FROM users LIMIT 0, 1000	2 row(s) returned	0.000 sec / 0.000 sec
13	01:30:42	USE fooddb	0 row(s) affected	0.000 sec
14	01:30:42	SELECT * FROM users LIMIT 0, 1000	2 row(s) returned	0.000 sec / 0.000 sec
15	01:30:42	USE fooddb	0 row(s) affected	0.000 sec
16	01:30:42	SELECT * FROM orders LIMIT 0, 1000	8 row(s) returned	0.000 sec / 0.000 sec

Conclusion:

This project demonstrates a **complete full-stack web application** using Java EE technologies. It integrates **front-end design**, **server-side processing**, and **database interaction** to create a functional online food ordering system. Users can register, login, browse menu, manage cart, and place orders efficiently, while the backend ensures data consistency and session management.
